---

Following a review of the ATF HASP, below are the details Sam discussed last night with Gary.

Subject: RE: ATF HASP for your review

I looked at the current real estate for sale in the area and the age of the homes, in the area of the explosion, definitely would support cause for asbestos sampling. The facility itself was from the 50's? right? So definitely some concerns there.

Would the asbestos sampling be from a worker protection or community?

In my opinion determining negative exposure is just as important as determining exposure so I would do it.

Worker protection can probably be mitigated with dust suppression at the site. Has the onsite OSHA personnel provided any insight on this?
